

L-type super racing damper pulley kit

Passed 12,000 revolutions test and approved by SFI international safety standards!

This racing damper pulley kit is made of reinforced parts. It is designed with the rotation ratio of each pulley in mind, and is compatible with high-output engines.

Size

- Damper outer diameter: 159
- Pulley diameter: 102

Price ¥83,000 kit

L-type Super Street Damper Pulley Set

Passed 12,000 revolutions test and approved by SFI international safety standards!

A street type that allows the use of genuine water pump pulley and alternator pulley.

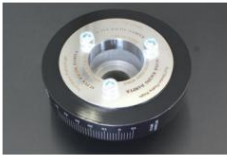

Size

- Damper outer diameter: 159
- Pulley diameter: 102/136 available

Price ¥56,500 set

Super racing damper pulley (single item)

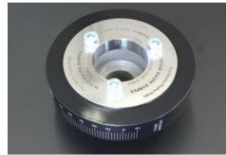

A racing pulley that can absorb vibrations from the crankshaft.

(With timing memory) *For use with 11mm reinforced belts only.

Price ¥55,000

*Can be used as a replacement for NISMO pulleys.

Super Street Damper Pulley (single item)

A sports type pulley that can use standard belts while retaining its vibration absorbing potential.

Pulley diameter:

102 low charge type for sports driving 136 high charge type for city driving

Price ¥55,000

(with timing memory)

Chromoly water pump pulley

(Single item)

Adopts the most suitable pulley ratio for water temperature control!

*For 11mm reinforced belt only

Price ¥17,600

13mm standard fan belt

(Single item)

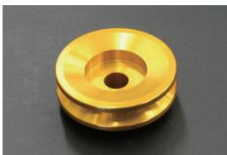

Street type that perfectly matches the combination of genuine water pump and alternator pulley. *Belt size: 102 13mm x 315mm 136 13mm x 330mm

¥950
¥950

Aluminum big dynamo pulley

(Single item) **Timing indicator**

(Single item)

It reduces the burden on the dynamo even when used at high revolutions and ensures sufficient charging even at low revolutions.

(There are three types depending on the alternator)

1. Hole diameter 15 for genuine alternator Price ¥8,500

(External fan type) Hole diameter 17 For genuine alternator Price ¥8,500

(External fan type) Hole diameter 15 for Kameari alternator Price ¥8,500

(Built-in fan type) *Black and high power alternator

*For 11mm reinforced belt only

A special product that can accurately read the pulley memory.

Price ¥1,000

11mm Reinforced Fan Belt (sold separately) This reinforced belt is resistant to stretching and

breaking, and is also durable at high speeds.

Price ¥4,500

Timing Indicator

(Single item)

A dedicated product that can accurately read the pulley memory

Price ¥1,000

Features

Passed 12,000 revolution test and approved by SFI international safety standard! Achieves superior vibration absorption and durability that exceeds rubber dampers. A vibration weight that floats with liquid is installed in a completely sealed pulley to absorb vibration generated from the crankshaft. This significantly reduces damage to the crankshaft and metal and improves engine durability.

Coupling fan spacer (8mm thick)

There are different offsets for L-type vehicle fans. For fans that are closer to the engine, there is a risk that the fan may interfere with the damper pulley bolt. By inserting this spacer between the coupling and the fan, you can offset only the blades 8mm forward, preventing interference.

Price ¥4,600
