All the pipes are of the same length and are three-dimensional bends with a combination of the same radius.

The exhaust section uses a straightening triangle that is machined using high-precision mechanical molding! A new competition-spec design that prevents exhaust interference.

## S30 Super Octopus Legs-1

Designed to maximize engine performance, this is the pinnacle of the Kameari Drag Series!  
By utilizing 100% of the potential output that was lost in the past with conventional power strips, a significant power increase was achieved.  
This will ensure that every second counts in your favor, leading to a good time.
