

# Pillow upper mount

The load on the upper mount during driving is very large. With the genuine rubber bush upper mount, large bending occurs, impairing driving stability. The Kameari pillow upper mount is a must-have for sports driving, combining sufficient durability and functionality. It not only improves steering response, but also suppresses vertical movement and roll during cornering, bringing out the full performance of the suspension and shock absorbers and improving driving stability. In addition, the use of an adjustable pillow upper mount allows you to adjust the camber according to the road surface, tires, and suspension system settings, raising the limit of driving.

\*If the shock absorber is used as a Toyota shock absorber, the pillow nuts are different. We will replace the pillow nuts for Toyota shock absorbers free of charge when you place your order.

## 510 Pillow upper mount (for front)

type	Camber adjustable (negative 23mm, positive 10mm)
Material	Duralumin plate and chromium bolt
accessories	Pillow Nut, Pillow Collar A
price	1set ¥27,000
