

Infrared full-transmission kit (Kameari specification, high performance type)

* Installation kits are available for each engine. Easily convert vehicles with factory points to full transmission.

This is the Lumenition Kameari version, made by Autocar, a prestigious manufacturer of electrical parts in the UK. It uses an infrared sensor that can pick up at several times higher speeds than a magnetic sensor, and is a high-energy built-in full-transistor kit that covers a wide range of 30 to 16,000 RPM with a strong spark. It also performs well under harsh conditions such as starting an engine in cold climates or with a high compression ratio engine.

L6 Infrared full track kit

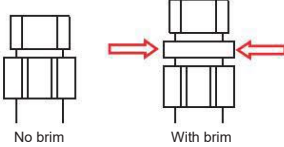

(Kameari specification)

Kit price
•For Disvi without brim
¥60,000
(Part number: LU-L601)
